

Amnisure ROM Testing

Effective Date: 10/1/2025

Corewell Health East Troy Laboratory will be transitioning Amnisure ROM testing from Point of Care to the Main Laboratory.

Kits will be supplied by the Laboratory. Specimens will be collected using the supplied vaginal swab (1 minute) and the swab will be placed in the vial of solvent supplied for 1 minute prior to being capped and sent to the Main Laboratory. The solvent tube must be properly labeled with the patient testing label printed when the test is ordered.

Testing will be performed in the Chemistry department.

An order for Amnisure Qualitative (Lab4016) will need to be entered in EPIC. Results will be available in Chart Review using the Labs tab.

If you have questions, please contact Corewell Health Beaumont Hospital Troy Chemistry
